

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) An OLED device formed on a substrate, comprising:
 - a) at least one light emitting layer arranged to produce light having a portion that is normal to the substrate in a predetermined emitting area;
 - b) a reflector and a semi-transparent reflector forming a microcavity structure for resonating the light produced in the at least one light emitting layer to provide red, green or blue light normal to the substrate; and
 - c) a color filter element disposed relative to a first portion of the ~~predetermined emitting area~~ semi-transparent reflector so as to filter the normal red, green or blue resonated light that passes through the color filtered element and the semi-transparent reflector and not covering a second portion of the semi-transparent reflector so that transmit substantially-unfiltered normal red, green or blue normal light that passes through a the second portion, of the predetermined emitting area.
2. (Original) The OLED device of claim 1 where the reflector, the semi-transparent reflector, or both, also serve as electrodes for the light emitting layer.
3. (Original) The OLED device of claim 1 where the semi-transparent reflector is Ag or an alloy containing Ag.
4. (Original) The OLED device of claim 1 where the device is top emitting.
5. (Original) The OLED device of claim 1 where the device is bottom emitting.

6. (Original) The OLED device of claim 1 wherein the color filter element includes spaced striped filtered portions.

7. (Previously Presented) The OLED device of claim 1 wherein the color filter element includes openings in the color filter element to provide the unfiltered normal light.
